The Linked Data Interface

■ The project follows the Linked Data principles

- All concepts are identified using URI references
- All URIs are dereferencable over the Web into a small RDF snippet
- This snippets contain all in-bound and out-bound arcs of a node

■ The Linked Data interface can be used by

- Semantic Web Browsers, like
 - DISCO Hyperdata Browser
 - Tabulator Browser
 - OpenLink RDF Browser
- Semantic Web Crawlers, like
 - SWSE (DERI, Ireland)
 - Zitgist (Zitgist LLC, USA)
 - Swoogle (UMBC, USA)
